

SHUBHADA BENURKAR

AI & Data Science · Full-Stack Development · Machine Learning

+91-9980319968 | benurkarshubhada1@gmail.com | [GitHub](#) | [LinkedIn](#) | [LeetCode](#) | [Codeforces](#)

SUMMARY

Second-year B.Tech student in AI & Data Science at IIITR with hands-on experience building production-grade full-stack systems and end-to-end ML pipelines. Independently architected LoadBack, a multi-portal logistics marketplace with AI-driven matching, real-time GPS tracking, and payment integration. Passionate about solving real-world problems at the intersection of software engineering and machine learning. Seeking a Software Development Engineer internship at Amazon to contribute to large-scale, customer-facing systems.

EDUCATION

Indian Institute of Information Technology, Raichur (IIITR) | B.Tech — AI & Data Science | 2nd Year 2024 – 2028

TECHNICAL SKILLS

Languages	Python, JavaScript, SQL, C/C++
Frameworks	FastAPI, React.js, Node.js, SQLAlchemy, TensorFlow, Keras, OpenCV, Streamlit
ML / AI	Scikit-learn, XGBoost, Random Forest, CNN, SMOTE, Pandas, NumPy, Matplotlib
Tools	PostgreSQL, SQLite, Git, Docker, JWT, REST APIs, WebSockets, Razorpay, Cloudinary, LocationIQ
Concepts	Data Structures & Algorithms, System Design, OOP, Data Mining, Agile

COMPETITIVE PROGRAMMING

LeetCode	shubhada8	101 Problems Solved	Arrays, Sliding Window, Graphs, Strings
Codeforces	shubhadabenurkar	Rating: 589	Active contest participant

PROJECTS

Accident Severity Prediction | [Python](#) · [Scikit-learn](#) · [XGBoost](#) · [Random Forest](#) · [SMOTE](#) 2024 [GitHub](#) | [Live App](#)

- Built end-to-end ML pipeline on real-world road accident data — data cleaning, feature engineering, SMOTE oversampling for class imbalance, and hyperparameter tuning
- Benchmarked Random Forest vs XGBoost across precision, recall, and F1; Random Forest outperformed — results applicable to traffic authority resource allocation and road safety planning

Image Colorization using Deep Learning | [Python](#) · [TensorFlow](#) · [Keras](#) · [OpenCV](#) · [CNN](#) · [Streamlit](#) 2024 [GitHub](#)

- Designed a CNN pipeline to infer chrominance channels from grayscale images using LAB color space decomposition, enabling automatic photo colorization
- Built efficient data pipelines for preprocessing, batching, training, and inference; improved color prediction via normalization, augmentation, and hyperparameter tuning — deployed as a Streamlit app

LoadBack — Logistics Marketplace | [FastAPI](#) · [React](#) · [PostgreSQL](#) · [WebSockets](#) · [JWT](#) · [Razorpay](#) 2024 – Present [GitHub](#)

- Independently built a 2-portal platform (Company / Driver) with a 9-step load-to-payment workflow: posting → AI matching → GPS tracking → photo-verified delivery → automated payment release
- 7-signal AI matching engine ranking drivers by distance (40%), price (25%), route, truck type, rating, and capacity — Razorpay escrow (90/10 split), LocationIQ GPS, Twilio WhatsApp OTP

Women Safety App | [Mobile](#) · [Real-time Services](#) · [Backend API](#) 2024 [GitHub](#)

- Built a safety application with SOS alert system, live location sharing, and instant emergency contact notification via background service
- Backend API for alert management, user profiles, and emergency contact synchronization with panic-button UX prioritizing sub-second response

ACHIEVEMENTS

- Built LoadBack solo — full system design, 2 portals, 7-signal AI matching engine, WebSocket GPS, and end-to-end Razorpay escrow payment integration
- 101+ DSA problems on LeetCode ([shubhada8](#)); active Codeforces contestant ([shubhadabenurkar](#), Rating 589)
- Pursuing B.Tech in AI & Data Science at IIITR — premier NIT-equivalent institute under Ministry of Education, Govt. of India
